

We will **Beat Childhood Cancer** by funding research and clinical trials for children with solid tumor cancers creating options for kids **TODAY** to increase survival and decrease toxicity.

### **Our Vision**

Change the story for the next family to help every child, everywhere survive and thrive.

2022**

# For Every Child, EVERYWHERE

## 2022 Financials

### Where The Money Goes

### Where The Money Comes From

## A letter from Sarah Bartzosz, Executive Director

I am incredibly grateful to the wonderful partners and benefactors nationwide that allow the Beat Childhood Cancer Foundation to provide this overview highlighting a year of transition, success, commitment, and hope.

For more than a decade, the organization has *funded* and built a precision medicine program aimed at *finding* better treatments by *fueling* the next generation of less-toxic therapies and, ultimately, cures. Fund. Find. Fuel.

The IN:Formation Project, our renamed precision medicine program, expanded in 2022 changing the way children with solid tumor cancers can and *will* be treated. One size does not fit all, just as one treatment does not work for all children.

By coming together *in formation* with the right **information**, we have the opportunity, we have the knowledge, we have the power to beat childhood cancer. While every cancer and every patient is unique, the expectation is that the lessons learned from one cancer will broaden the knowledge to help every child, everywhere. Fund. Find. Fuel.

With golden hope,

*Where The Money Goes* represents overall spending during the 2022 Fiscal Year. *Where The Money Comes From* represents **\$4,860,055**, the total funds raised during the 2022 Fiscal Year (including multi-year pledges.)

## Instead of treating cancer by its name, **treat it by its nature.**

**No two tumors are the same.** In fact, they vary greatly among patients with the same diagnosis. Many times, a child's tumor may share characteristics with other types of cancer – cancers with different targets and different treatments.

### Participation in the IN:Formation Project:

Provides a child's team of physicians the **most complete tumor information** with comprehensive genomic insights.

Gains access to a **molecular tumor board** working to synthesize powerful insights to **help personalize a child's treatment.**

Contributes to advancements in **less-toxic, more precise and more effective therapies** for solid tumor cancers in kids.

**IN:FORMATION**  
PROJECT

Expanding and accelerating  
how research is done.
